LANCE KRYSTOFER A. GALICIA

Manila, Philippines • lance_galicia@dlsu.edu.ph • linkedin.com/in/lancegalicia • github.com/galiciary

Education

De La Salle University — Manila, Philippines
Bachelor of Science in Computer Science — August 2028
Major in Network and Information Security
Cumulative GPA: 3.351 / 4.00

Relevant Coursework: Information Security; Computer Networks; Information Management; Computer Organization and Architecture; Intelligent Systems; Web Application Development; Data Structures and Algorithms

Certifications

ISC2 Certified in Cybersecurity (CC) Passer — Manila, Philippines
International Information System Security Certification Consortium (ISC2) — March 2026

Projects

Galicious Secret Scanner — Python, Security, CLI
Course Project, Advanced and Offensive Security — August 2026

- Built a scanner detecting credentials exposed in a local folder or GitHub repository, including secrets deleted from the working tree but still recoverable from git history
- Combined a regex signature library with a Shannon-entropy fallback for custom tokens, feeding one pipeline that deduplicates, scores and redacts every finding
- Scoped the tool to detection and reporting, ensuring no output in any format contains a full secret

Full Capacity: The Evolution of Computer Data Storage — Astro, React, MDX
Course Project, Introduction to Computer Organization and Architecture II — May – August 2026

- Built the NAND flash chapter of an interactive storage exhibit, comprising eleven React components that simulate floating-gate charge trapping, wear leveling, cell voltage distribution and SSD interface throughput
- Developed the exhibit's about page and layout, deployed to GitHub Pages

ResQ: Response and Emergency Support Queue — Node.js, Express, MongoDB, Handlebars
Course Project, Web Application Development — January – April 2026

- Built the Express backend for a disaster-response forum, covering authentication, posting, profile and saved-post routes over a MongoDB data layer
- Implemented session-based authentication and image upload handling, with seeding scripts to populate users and posts for development
- Structured the application around an MVC pattern with separate controllers, models and routes, deployed on Render

Experience

La Salle Computer Society — Manila, Philippines
Backend Engineer, Systems and Infrastructure — September 2026 – Present

- Built POST /api/events/{id}/availability for Align (TypeScript/Fastify/PostgreSQL/Drizzle), a team availability scheduling tool, validating every submitted slot against the event's configured dates, daily window and interval
- Designed the participant and availability schema around database-enforced invariants and a least-privilege runtime role, proven by integration tests that confirm the role holds DML without DDL
- Added collision-safe public event slugs for shareable links, generated with rejection sampling so the identifier space stays uniform

Leadership & Activities

DLSU Data Science Society Manila, Philippines
Associate, Data and Research September 2025 – August 2026

- Built pandas cleaning scripts for event pre-registration and attendance form data, mapping around 50 free-text degree program spellings and dozens of institution name variants to standard values, parsing names into structured fields, and validating student ID numbers
- Co-developed the Dashboard Overview page (Streamlit, Altair, Supabase) for the organization's internal analytics dashboard, tracking pre-registrations, attendance, engagement rate and satisfaction across six evaluation criteria, with event trends and rankings

Associate, External Relations September 2024 – August 2025

- Sourced speakers and partners for data science seminars, expanding the organization's reach among technology professionals

DLSU Association for Computing Machinery Student Chapter Manila, Philippines
September 2025 – August 2026
Director, Publications

- Led a committee of around 10 writers as the publication arm of the College of Computer Studies, assigning and editing research-backed articles on technology and innovation
- Hosted workshops on technical research and writing, building the committee's ability to produce articles independently

Skills & Interests

Technical: Python, Java, C, R, TypeScript, SQL, x86-64 Assembly; React, Astro, Node.js, Express, Fastify, Streamlit, pandas, NumPy, Altair; PostgreSQL, MySQL, MongoDB, Supabase, Drizzle; Git, Jest
Languages: Fluent in English, Filipino, and Bikolano
Interests: Strength training, literature, films and series
